EXPERIENCE

Google

Software Engineer - Gmail

Sunnyvale, CA | April 2026 - Present

Software Engineering Intern - Gmail

Sunnyvale, CA | June 2025 - September 2025

- Reduced Gmail Android performance latency by **15ms** at p95, and achieved a **1%** improvement for +2B users.
- Implemented multiple optimizations and monitored rollout to production using **Java**, **Kotlin**, and **A/B testing**.

Software Engineering Intern - Workspace Platform

Sunnyvale, CA | May 2024 - August 2024

- Migrated essential user data between databases using **Java** to improve latency and consistency for users. Validated changed with unit and integration tests.
- Optimized API performance affecting large enterprise customers.

Software Engineering Intern, STEP - GCP SRE

Kitchener, ON | May 2023 - August 2023

- Launched an internal command line tool that automated throttling limits for internal infrastructure systems using **Python**, **RPCs** and **protocol buffers**.
- Improved operational efficiency for this request across the team by **80%**.

Sun Life Financial

Mobile Developer Intern

Montreal, QC | January 2023 - April 2023

- Designed, developed and tested Android UI functionalities using SOLID and MVVM principles.
- Refactored **over 50%** of the existing frontend from **Java/XML** to **Jetpack Compose/Kotlin**. Delivered features to the Android app used by over 30,000+ clients.

Introspect Technology

Software Intern

Montreal, QC | May 2022 - August 2022

- Increased test coverage for high-speed electronic devices with automating testing workflow using **Python** and **Batch**.

PROJECTS

Café Bloc Database Program | *Java, Db2*

- Built a user-facing Db2 database program that simulates what a real business would build. Wrote **SQL** queries to update backend with user requests in real-time.

Mock OS | *C*

- Built parts of an operating system using **C** including the shell, kernel, memory-manager, and a basic file system.

ACTIVITIES

Hack4Impact Backend Developer | *Typescript, Node.js, Express*

September 2023 - April 2024

- Worked on a full-stack web app for McGill's Greenpeace chapter using **React**, **Typescript** and **Docker**. Responsible for creating custom **REST API** endpoints using **Node.js** and **Express**.

TECHNICAL SKILLS

Languages: Java, Python, C, SQL

Tools/Technologies: JUnit, Git, Node.js, Bash, Db2, Postgres

Courses: Data Structures and Algorithms, Computer Architecture, Software Design, Machine Learning, Reinforcement Learning, Database Systems, Operating Systems, Distributed Systems, Probability, Statistics

EDUCATION

McGill University

Montreal, QC

Computer Science Major

September 2021 - December 2025
